

PILLAR ENGINEERING & SURVEYING, P.C.

Wytheville, Virginia

Our professionals are here to help you survey, plan, design, inspect and manage any aspect of your land use project. From ballfields to gas stations and from homes to factories, we have over 75 years of combined experience in recreational, residential, commercial, industrial and municipal land use and development projects. Commitment to sound engineering and surveying practices, attention to detail and listening to the client are the pillars of quality work.

From dreams to reality, our site engineering design and surveying services can meet your needs. Pillar maximizes your land potential through innovative, thoughtful and economically sound engineering and design practices. We keep focus on the big picture by thinking about constructability and maintenance in all of our designs.

Our construction inspection service ensures the final product matches the project vision in quality and workmanship. We perform construction measurement and testing such as concrete and nuclear compaction tests on materials used in the project. Pillar also performs foundation inspections for structural integrity and FHA/HUD compliance.

Pillar also provides project management for your project. We can produce design specifications and bid packages as well as help solicit and choose qualified Sub-Consultants and Contractors to perform the work.

From consultation to turn-key, let Pillar be your professional partner and work for you.
